

Week-6: Code-along

Loy Yee Keen

2023-09-16

II. Code to edit and execute using the Code-along-6.Rmd file

A. for loop

1. Simple for loop (Slide #6)

```
# Enter code here  
for (x in c(3,6,9)) {  
  print(x) }
```

```
## [1] 3  
## [1] 6  
## [1] 9
```

2. for loops structure (Slide #7)

```
# Left-hand side code: for loop for passing values  
for (x in 1:8) {print(x)}
```

```
## [1] 1  
## [1] 2  
## [1] 3  
## [1] 4  
## [1] 5  
## [1] 6  
## [1] 7  
## [1] 8
```

```
# Right-hand side code: for loop for passing indices
for (x in 1:8)
  {y <- seq(from=100,to=200,by=5)
  print(y[x])}
```

```
## [1] 100
## [1] 105
## [1] 110
## [1] 115
## [1] 120
## [1] 125
## [1] 130
## [1] 135
```

3. Example: find sample means (Slide #9)

```
# Enter code here
sample_sizes <- c(5, 10, 15, 20, 25000)
sample_means <- double(length(sample_sizes))
for (i in seq_along(sample_sizes)) {
  sample_means[i] <- mean(rnorm(sample_sizes[i]))
}
sample_means
```

```
## [1] -0.098770560 -0.098579924 -0.172821937  0.063202626 -0.00464
7821
```

4. Alternate ways to pre-allocate space (Slide #12)

```
# Example 1 for data_type=double
sample_means <- vector("double", length = 5)
# Example 2 for data_type=double
sample_means <- double(5)
# Example 3 for data_type=double
sample_means <- rep(0, length(sample_sizes))
```

```
# Initialisation of data_list  
data_list <- vector("list", length = 5)
```

5. Review: Vectorized operations (Slide #18)

```
a <- 7:11  
b <- 8:12  
out <- rep(0L, 5)  
for (i in seq_along(a)) {  
  out[i] <- a[i] + b[i]  
}  
out
```

```
## [1] 15 17 19 21 23
```

```
# Taking advantage of vectorization  
# Vector with numbers from 7 to 11  
a <- 7:11  
# Vector with numbers from 8 to 12  
b <- 8:12  
out <- a + b  
out
```

B. Functionals

6. for loops vs Functionals (Slides #23 and #24)

```
# Slide 23
# Initialise a vector with the size of 5 different samples
sample_sizes <- c(5, 10, 15, 20, 25000)
# Create a functional- function inside a function
sample_summary <- function(sample_sizes, fun) {
  # Initialise a vector of the same size as sample_sizes
  out <- vector("double", length(sample_sizes))
  # Run the for loop for as long as the length of sample_sizes
  for (i in seq_along(sample_sizes)) {
    # Perform operations indicated fun
    out[i] <- fun(rnorm(sample_sizes[i]))
  }
  return(out)
}
```

```
# Slide 24
#Compute mean
sample_summary(sample_sizes,mean)
```

```
## [1] -0.1958028 -0.7094409 -0.2257531 -0.2240661  0.0111445
```

```
# Compute median
sample_summary(sample_sizes,median)
```

```
## [1]  0.329475964 -0.641187254  0.149188779 -0.231677912 -0.00284
3084
```

```
# Compute sd
sample_summary(sample_sizes,sd)
```

```
## [1] 1.0923794 1.1070638 1.2874250 0.7478416 1.0121545
```

C. while loop

7. while loop (Slides #27)

```
# Left-hand side code: for loop  
for(i in 1:5){  
  print(i)  
}
```

```
## [1] 1  
## [1] 2  
## [1] 3  
## [1] 4  
## [1] 5
```

```
# Right-hand side code: while loop  
i <- 1  
while (i <= 5) {  
  # body  
  print(i)  
  i <- i + 1  
}
```

```
## [1] 1  
## [1] 2  
## [1] 3  
## [1] 4  
## [1] 5
```
